

XTENSIBLE SERVICES: Business & Technology Consulting

EXPERIENCED UTILITY EXPERTS SOLVING INDUSTRY CHALLENGES

Strategy &
Architecture Consulting

Business &
Technology Consulting

Enterprise Information
Management

System Integration

Business Intelligence
& Data Analytics

Training

Xtensible provides workshops on utility specific trends, including technology, vendor landscape, operations and analytics for informed business decisions to reduce risk and optimize performance covering all aspects of the utility.

Preparing your utility for the digital future is imperative. You must not only define and deliver digital business platforms but also effectively persuade business stakeholders to invest resources in digital projects.

Our services establish a strategy and roadmap for a sustained and scalable investment of digital capabilities across business and IT.

Establishing the building blocks that a program, project or strategy is executed upon is key. Our consultants ensure those building blocks are clearly defined and understood across the organization from both business operations and IT perspectives.

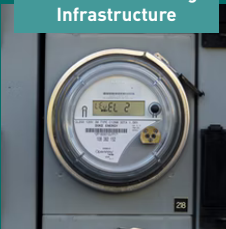

We will scale our services to support change efforts ranging from tactical improvements through large scale transformation efforts. Our business consultants are experienced leaders and practitioners who are customer-focused, are delivery-excellence driven, and can navigate and manage complex projects, working effectively across diverse business and technology organizations.

We have helped countless utilities world-wide in navigating business challenges such as:

Smart Energy
Services

Advanced Metering
Infrastructure

Storm
Preparedness

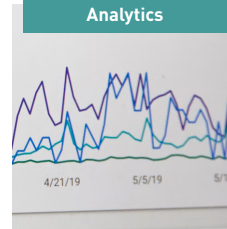

System
Replacements

Network
Connectivity

Asset
Analytics
