

XTENSIBLE SERVICES A Bridge Between IT and Business

HELPING YOU UNDERSTAND, MANAGE, INTEGRATE, AND USE YOUR DATA

Xtensible Solutions first opened its doors in 1998 as a standards-based consulting company for the utility industry. We embrace a culture that values leadership, innovation, and community. As we continue to grow, the heart of the company remains a close-knit circle of experienced professionals passionate about the work we do.

Our clients are large investor-owned utilities to local municipalities, for electric, gas and water.

Our commitment and focus on standards is a unique approach, simplifying complexities, setting the foundation for innovation and technology expansion.

Strategy &
Architecture Consulting

We define strategy and develop supporting architecture to realize business vision.

By utilizing our proven methodologies competing objectives across business units are prioritized resulting in buy in and agreed to action plan.

Business &
Technology Consulting

We establish synergy between business and technology for sustained and scalable investments across business and IT.

Workshops to capitalize on industry specific trends combined with our deep technology background result in an informed approach.

Business Intelligence
& Data Analytics

We apply our extensive experience with standards, best practices and leading platform technologies to accelerate analytics expansion.

Your information and intelligence from smart grid devices made available and preferred analytics generated in-house, by others or by us is deployed.

Enterprise Information
Management

We design and build a standards-based Enterprise Information Management foundation.

Our framework and maturity model produces sustainable results for your EIM foundation.

System Integration

We offer standard-based integration services within and across business functions.

Our technical analysis, design and assurance service combined with semantic modeling is a unique approach to reduce integration complexities and timelines.

Training

We provide onsite and remote utility standards training and workshops related to our service areas.

Our training gives an understanding of the beneficial impact of standards and planning for business innovation becomes a manageable process with our workshop framework.

METHODOLOGIES

Over the years working with our utility clients, we have developed our own frameworks and methodologies for consulting services and integration.

Xtensible Enterprise Information Management Framework

Our framework to help you leverage your systems to benefit the utility instead of maintaining numerous silos, leading to a true data driven organization.

Xtensible Maturity Model

Our maturity model helps you define your current state, the future based on your strategy and vision and the steps and priorities to take you there.

Xtensible Technical Analysis, Design and Assurance

Our TADA Services will enable architecturally coherent components to be implemented at different times by different projects, resulting in lower cost of ownership, faster implementation, to facilitate instead of hinder business change.

PRODUCTS

Our lessons learnt, methodologies and approaches are the foundation for our products, all aimed to help you understand, manage, integrate and use your data.
