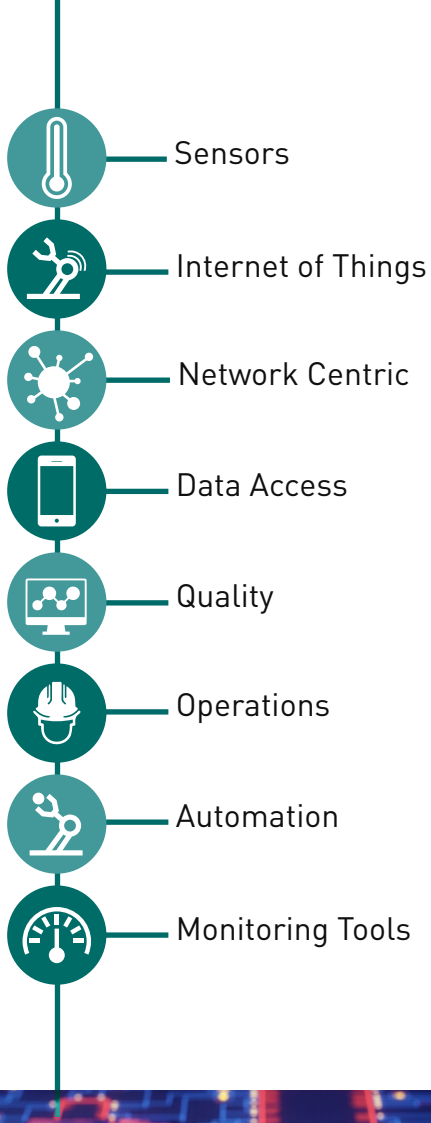
DATA DRIVEN
DIGITAL TRANSFORMATION

Data Driven Digital Transformation is about finding new ways to use data to drive efficiency, business insights, improve revenue and ultimately making sure that as a utility you provide energy for your customers, in a world where change is a daily consideration. The focus is utilizing the data provided through multiple means to enable:

- Empower business change from data-driven insights
- Raise awareness of opportunities
- Enable scalability and automation
- Ensure a scalable architecture growth

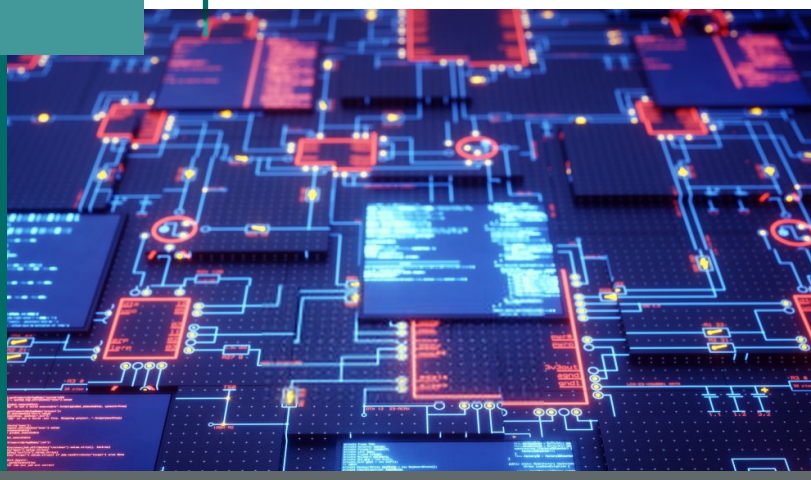
Xtensible can help your organization develop a consistent layer and ontology of your data and services across the enterprise. With over two decades of experience across six different continents in the utility industry, combined with our proven methodology and toolset, we can help you drive business value and growth from your data to achieve your Data Driven Digital Transformation.



TREAT YOUR DATA AS A VALUABLE ASSET

XTENSIBLE & INDUSTRY STANDARDS

Members of the Xtensible team lead and participate in over 30 different smart grid related standards development efforts. We leverage best practices and our expertise in the application of standards into Xtensible's consulting and systems integration services, thus providing utilities with unparalleled solutions.



If you are starting or continuing your Data Driven Digital Transformation, allow us to utilize our experience building solutions with interoperability in mind. Contact us today to reduce your risks and cost of implementation and ownership and set the foundation for the future.
